                                                                                                                                                                    The present sequence appears in the specification, which describes a method for modifying a Family II xylanase to improve its thermophilicity, atkalophilicity and or thermotolerance. This method comprises modification of amino acids 10, 27 or 29 of Trichoderma recess; xylanase
                                                                                                                                                                                                                                                                                                                  If or corresponding displaced amono words of another Family II xylanase, replacement of one or more union and sequences in the N-terminal region with corresponding aligned acqueres from another Family II xylanase to form a chimcoric xylanase and/on upstream extension of the N-terminable addition of upto 10 amino acids. The modified xylanases are useful for improving the bleechability of wood pulp by treatment at 55-75 degrees celsins and pH 7.5-9.0 for 5-180 minutes. They might also be useful as digestibility-improving animal feed additives. They might also be useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 14.4; DB 19; Length 573;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Details of M. Luberchlosis sequencing at the Sanger Centre are available on the World Wide Web.

(UKL, http://www.sanger.ac.uk/Projects/M_tuberchlosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers gene prediction was based on a Hidden Markov Model of TH genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observod/expected third position G + C.

CAUTION: In some cases we may not have predicted the correct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon date, quy, or tup, which is preceded by an upstream ribusome binding site sequence (optimulty 5-13pp before the initiation codon). If this cannot be identified we choose the most upstream
Deciphering the biology of Mycobacterium tuberculosis from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /organism="Mycobacterium tuberculosis H37Rv"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers.

Gene prediction was based on a Hidden Markow Model of TW genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position 6 + C.

CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (Higy 4fg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Rv0085, (MTCY251.03), len: 220, hycv, similar to

```

```
probable precured of serine protease. Has putative signal peptideat N-terminus and hydrophobic stretch at C-terminus. Contains three signatures typical of subtilase family: aspartic acid active site (PS00136), histidine active site (PS00137), serine active site (PS00138). FASTA results: 053863 SERINBFORTHSES (390 aa) opt: 241; E(): 8e-07; (38.0% identity in387 aa overlap), similar to MTCX15F10.29 (45.7% identity in 451 aa overlap)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAALIJTTAKEE YETTRI SCALAASC ITAGGGLMIJVRNALGTNYTRY SDATAGVVAAA

                                                                                                                                                                                                                                                                                                     initiation codon. Where possible we choose an initiation codon (alg. qtg. or ttq) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). It this cannot be identified we choose the most upstream
